

TBT

1. Operation Outline

The LED repeats lighting and lighting out by the time base timer (TBT) interrupt interval.

2. Each Setting

Interrupt generation interval : default = 819.2 [μ s]

main.c: Changing the value of "#define TBT_INTERVAL" allows changing the interrupt generation interval.

LED : LED0 (Port25)

3. Basic Operation

The TBT interrupt interval setting is selected, and the build is done.

The LED0 repeats lighting and lighting out by the selected interrupt interval.

4. Note

None.
