

Simplified CFD Model **Application Note**

Description

This document describes the Simplified CFD (Computational Fluid Dynamics) Model provided by Toshiba Electronic Devices & Storage Corporation. In this document, CFD means three-dimensional thermal fluid analysis.

1. Introduction

In recent years, the size reduction in electronic equipment, high-density mounting, and severe operating conditions such as high ambient temperatures have caused a variety of heat issues when selecting, placing electronic components to be used and designing boards.

Therefore, the importance of thermal design using cooling simulation with three forms of heat transfer: thermal conduction, thermal convection, and thermal radiation, is increasing.

Thermal models, such as the enclosure, the board, and the mounted components are required for cooling simulations. Toshiba Electronic Devices & Storage Corporation has created the Simplified CFD Model that is suitable for cooling simulations, focusing on MOSFET, and has started releasing this model. This Simplified CFD Model can be used with thermal fluid analysis tool to visualize three-dimensional behavior (temperature distribution and flow velocity).

This application note explains how to use the Simplified CFD Model and provides examples of cooling simulations.

2. Download file

A ZIP format file containing the following two files is downloaded for each product.

Table 2.1 Download files

Content of the file	File format (extension)	Content
Simplified CFD Model	STEP (stp)	Three-dimensional models used in cooling simulations
Material properties	Text (txt)	List of adjusted material properties assigned to each component in cooling simulations

Figure 2.1 Simplified CFD Model

(Open with 3D CAD)

Figure 2.2 Material property text

(Material property value list part)

The usage is described in Section 3. How to use .

3. How to use

3.1. Instructions for use

The procedure for using the download file is as follows.

1. Download ZIP file and extract it to any folder.
2. Convert the Simplified CFD Model to a simulation model with the 3D CAD tool for thermal fluid analysis tool used.
3. Import the simulation model to thermal fluid analysis tool.
4. Assign the physical property values described in the material property text file to each component of the imported model.
5. Set on thermal fluid analysis tool, then run cooling simulation.

For information on using 3D CAD tool or thermal fluid analysis tool, please contact the tool vender.

3.2. Component structure of Simplified CFD Model and the method to assign material properties

Figure 3.1 shows the component structure of the Simplified CFD Model. Table 3.1 shows the meaning of abbreviations for the components. The abbreviations given to the components can be checked by opening the Simplified CFD Model using 3D CAD tool. For SOP Advance product shown below, it consists of five components (Mold, Chip, SolderM, PinGS, and E-pad).

Figure 3.1 Component structure of Simplified CFD Model

Table 3.1 Meaning of abbreviations for components³¹

Abbreviation of component	Meaning
Mold	Molding
Chip	Semiconductor chip
SolderM	Solder for mounting semiconductor chip
PinGS	Gate and source pin (common block)
E-pad	Drain pad exposed at the bottom of the package

These abbreviations are the same as the components abbreviations in the material property text file shown in Figure 3.2.

Figure 3.2 shows an example of the contents of the material property text file for each component. In cooling simulation, the material properties of each component listed in the file are assigned on thermal fluid analysis tool.

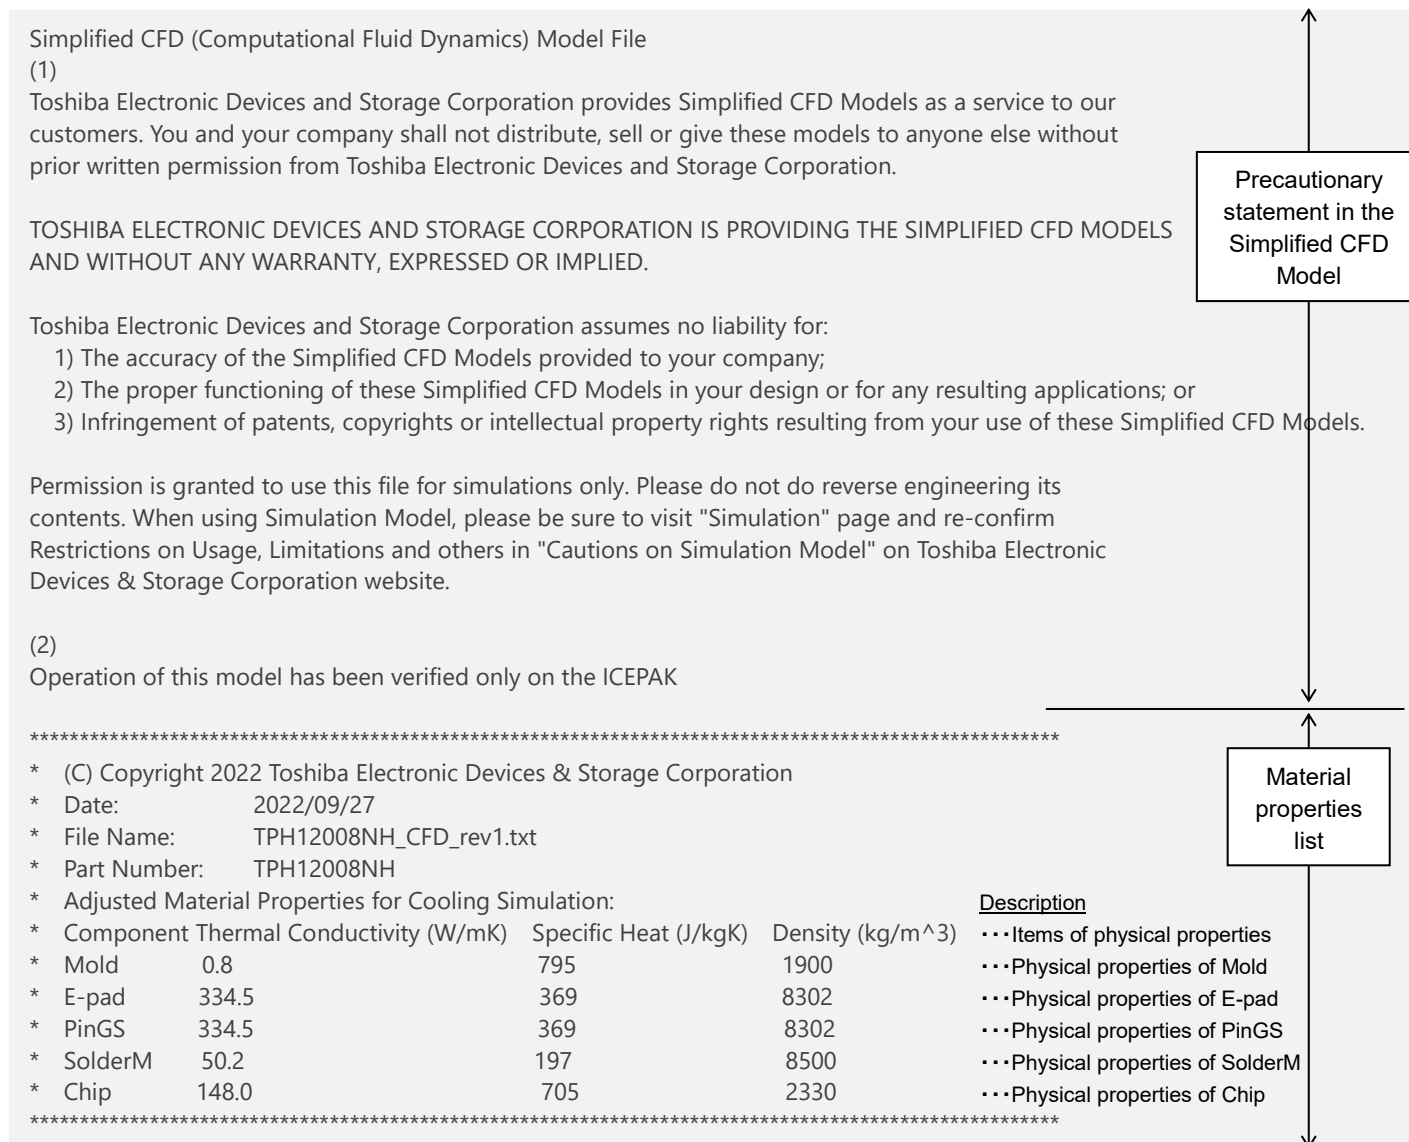

Figure 3.2 Example of material property text file

4. Simulation example of Simplified CFD Model

4.1. Cooling simulation

Thermal analysis methods used in thermal designs are broadly categorized into two methods: using a simplified model converting heat-flow paths to an electric circuit network, and using a three-dimensional model generated based on device geometry by CFD. While the former considers only one-dimensional behavior in SPICE simulations, the latter calculates the three-dimensional behavior of the fluid so that the temperature distribution and heat flow can be visualized and checked, including the inside that cannot be seen by actual devices. Section 4.2 shows an example of cooling simulation using the Simplified CFD Model.

4.2. Cooling simulation examples

This example shows a simulation of a board model assuming an inverter circuit. Figure 4.1 shows the model used for cooling simulation. The Simplified CFD Models of six MOSFETs are mounted on the board with heatsink. This section explains how to visualize the temperature distribution and heat flow using cooling simulation results in this model.

Figure 4.1 Simulation model example

Figure 4.2 shows the temperature distribution on the model surface that shows heat spread to the board or heatsink as MOSFET temperature rises. In addition, thermal fluid analysis tool display setting allows checking the temperature inside the device, such as a chip, that cannot be seen in the actual set. On the board, the temperature inside the board (Cu layers and Vias) as shown in Figure 4.3 can be checked.

Figure 4.2 Surface temperature distribution (overall, mold surface and inside)

Figure 4.3 Temperature distributions inside the board (Cu Layers, Vias)

Figure 4.4 shows the temperature distribution of the cross section including the area around the board. This result allows checking the spread of heat on the heatsink and seeing how much heat is dissipated.

Figure 4.4 Cross-sectional temperature distribution

Figure 4.5 shows the air velocity and heat flow in the chamber set during the analysis.

Figure 4.5 Fluid display around the board (flow velocity and heat-flow path in the chamber)

5. Summary

This document explains how to use the Simplified CFD Model and examples of its use. Toshiba Electronic Devices & Storage Corporation has released some of our Simplified CFD Models on website since October 2022, and continues to add them. They can be downloaded from the parametric search page or from each product page.

Various application notes for thermal designs are also available on our website. Please use them together.

RESTRICTIONS ON PRODUCT USE

Toshiba Corporation and its subsidiaries and affiliates are collectively referred to as "TOSHIBA". Hardware, software and systems described in this document are collectively referred to as "Product".

- TOSHIBA reserves the right to make changes to the information in this document and related Product without notice.
- This document and any information herein may not be reproduced without prior written permission from TOSHIBA. Even with TOSHIBA's written permission, reproduction is permissible only if reproduction is without alteration/omission.
- Though TOSHIBA works continually to improve Product's quality and reliability, Product can malfunction or fail. Customers are responsible for complying with safety standards and for providing adequate designs and safeguards for their hardware, software and systems which minimize risk and avoid situations in which a malfunction or failure of Product could cause loss of human life, bodily injury or damage to property, including data loss or corruption. Before customers use the Product, create designs including the Product, or incorporate the Product into their own applications, customers must also refer to and comply with (a) the latest versions of all relevant TOSHIBA information, including without limitation, this document, the specifications, the data sheets and application notes for Product and the precautions and conditions set forth in the "TOSHIBA Semiconductor Reliability Handbook" and (b) the instructions for the application with which the Product will be used with or for. Customers are solely responsible for all aspects of their own product design or applications, including but not limited to (a) determining the appropriateness of the use of this Product in such design or applications; (b) evaluating and determining the applicability of any information contained in this document, or in charts, diagrams, programs, algorithms, sample application circuits, or any other referenced documents; and (c) validating all operating parameters for such designs and applications. **TOSHIBA ASSUMES NO LIABILITY FOR CUSTOMERS' PRODUCT DESIGN OR APPLICATIONS.**
- **PRODUCT IS NEITHER INTENDED NOR WARRANTED FOR USE IN EQUIPMENTS OR SYSTEMS THAT REQUIRE EXTRAORDINARILY HIGH LEVELS OF QUALITY AND/OR RELIABILITY, AND/OR A MALFUNCTION OR FAILURE OF WHICH MAY CAUSE LOSS OF HUMAN LIFE, BODILY INJURY, SERIOUS PROPERTY DAMAGE AND/OR SERIOUS PUBLIC IMPACT ("UNINTENDED USE").** Except for specific applications as expressly stated in this document, Unintended Use includes, without limitation, equipment used in nuclear facilities, equipment used in the aerospace industry, lifesaving and/or life supporting medical equipment, equipment used for automobiles, trains, ships and other transportation, traffic signaling equipment, equipment used to control combustions or explosions, safety devices, elevators and escalators, and devices related to power plant. **IF YOU USE PRODUCT FOR UNINTENDED USE, TOSHIBA ASSUMES NO LIABILITY FOR PRODUCT.** For details, please contact your TOSHIBA sales representative or contact us via our website.
- Do not disassemble, analyze, reverse-engineer, alter, modify, translate or copy Product, whether in whole or in part.
- Product shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable laws or regulations.
- The information contained herein is presented only as guidance for Product use. No responsibility is assumed by TOSHIBA for any infringement of patents or any other intellectual property rights of third parties that may result from the use of Product. No license to any intellectual property right is granted by this document, whether express or implied, by estoppel or otherwise.
- **ABSENT A WRITTEN SIGNED AGREEMENT, EXCEPT AS PROVIDED IN THE RELEVANT TERMS AND CONDITIONS OF SALE FOR PRODUCT, AND TO THE MAXIMUM EXTENT ALLOWABLE BY LAW, TOSHIBA (1) ASSUMES NO LIABILITY WHATSOEVER, INCLUDING WITHOUT LIMITATION, INDIRECT, CONSEQUENTIAL, SPECIAL, OR INCIDENTAL DAMAGES OR LOSS, INCLUDING WITHOUT LIMITATION, LOSS OF PROFITS, LOSS OF OPPORTUNITIES, BUSINESS INTERRUPTION AND LOSS OF DATA, AND (2) DISCLAIMS ANY AND ALL EXPRESS OR IMPLIED WARRANTIES AND CONDITIONS RELATED TO SALE, USE OF PRODUCT, OR INFORMATION, INCLUDING WARRANTIES OR CONDITIONS OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, ACCURACY OF INFORMATION, OR NONINFRINGEMENT.**
- Do not use or otherwise make available Product or related software or technology for any military purposes, including without limitation, for the design, development, use, stockpiling or manufacturing of nuclear, chemical, or biological weapons or missile technology products (mass destruction weapons). Product and related software and technology may be controlled under the applicable export laws and regulations including, without limitation, the Japanese Foreign Exchange and Foreign Trade Law and the U.S. Export Administration Regulations. Export and re-export of Product or related software or technology are strictly prohibited except in compliance with all applicable export laws and regulations.
- Please contact your TOSHIBA sales representative for details as to environmental matters such as the RoHS compatibility of Product. Please use Product in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. **TOSHIBA ASSUMES NO LIABILITY FOR DAMAGES OR LOSSES OCCURRING AS A RESULT OF NONCOMPLIANCE WITH APPLICABLE LAWS AND REGULATIONS.**
